

### **Chart the Weather**

Chart the temperatures of a month and make note of the activities you did on weekends.

1. Look up the weather each morning and write the high and low temperature on a graph.
2. Then look outside to determine if it is a sunny, cloudy, or snowy day. Record that on your graph.
3. After the month is over, look back at the graph and talk about what you notice. Are there any patterns? Was the weather generally the same temperature? How often did the sun come out?
